

# JOSEPH M. MORANTE JR.

New York, NY | 929-231-2418 | morantejoseph1@gmail.com | LinkedIn | Portfolio

## EXPERIENCE

**Zeta Global** — New York, NY

**Apr 2026–Present**

*Senior Analyst, Activation Innovation — AI & Measurement*

- Owned rapid delivery of an interim LiveIntent S3 → Snowflake solution after senior leadership identified a Q2 business deadline; translated requirements across stakeholders, shipped in **~4 weeks, accelerated delivery by ~3 months**, and enabled adoption by **45 analysts across 3 analytics teams**, becoming the SME for schemas, access patterns, and downstream use.
- Built and enabled adoption of a multi-source AI analytics environment connecting Snowflake, AWS S3, and Hive to Cursor through **custom Python MCP servers**, giving analytics users governed access to enterprise data from an AI-native development workflow.
- Engineered production-oriented guardrails for AI-assisted data access, including SQL/HiveQL validation, injection prevention, row-limit enforcement, and enterprise SSO; **improved Hive analysis performance ~2×** using direct HiveServer2/Thrift connectivity and Parquet-native S3 reads with PyArrow.
- Co-developing a modular AI-assisted analytics platform that automates the **Jira → SQL → analysis → stakeholder update → GitLab** workflow using shared semantic context, reusable code-generation patterns, privacy-aware execution, automated validation, and mandatory human approval before production changes.
- Leading solution architecture for a **natural-language analytics platform** combining MCP, governed semantic context, text-to-SQL, and Slack self-service; directed an intern-led POC and Client Success discovery sessions to turn recurring business questions into reusable, governed analytics workflows.
- Architecting an **open-source integrated marketing measurement framework** that extends Google Meridian with Python/PyMC campaign-level Bayesian decomposition, Snowflake data pipelines, validation diagnostics, and a Streamlit decision layer for privacy-resilient channel, campaign, and placement measurement.

**Zeta Global** — New York, NY

**May 2025–Mar 2026**

*Senior Analyst, Analytics & Insights — Programmatic*

- Architected a reusable **Markov journey-analysis framework** in Hive/SQL modeling ordered cross-channel paths, frequency-aware states, UTM arrival behavior, path-level lift, adaptive volume thresholds, and automated QA; translated the methodology into an executive and Data Science-facing playbook used in **client discussions with a CMO** and technical stakeholders evaluating the approach.
- Built a Tableau/Vertica/Hive analytics product for recurring client questions, supporting 6–10 concurrent requests with three-day SLAs while reducing turnaround from **~1 week to minutes and manual-query volume by 70–80%**.
- Identified a recurring campaign-diagnostics pain point and built an AI-powered root-cause-analysis prototype in one month using Python, Gradio, and the OpenAI API; integrated analytical and external context and demonstrated the solution **company-wide at Sales Kickoff**.

**Bloomberg Media** — New York, NY

**Oct 2022–Jan 2025**

*Media Data Analyst*

- Partnered with client-facing teams across North America to translate advertising and inventory questions into analytical solutions using Mode, BigQuery, and audience data, supporting **\$200K–\$1M commercial opportunities**.
- Re-engineered benchmark reporting from Excel into parameterized SQL and Mode Analytics, reducing processing time from **~1 week to 1 day (~86%)** and creating a repeatable self-service workflow.
- Built BigQuery workflows across **1M+ subscriber records and ~1 TB** of data for rolling inactivity measurement; developed Naive Bayes audience models that surfaced segments with **~2×** **higher engagement odds**.

## ADDITIONAL AI LEADERSHIP, RESEARCH & TEACHING

**Algoverse** — Remote

**May 2026–Present**

*Artificial Intelligence Researcher (Part-Time)*

- In a four-person group mentored by Blake Jiang (CMU PhD, Anthropic), research reliable RL for LLM agents, focusing on reward-model uncertainty and failure detection.**

**Susquehanna University** — Selinsgrove, PA

**Aug 2025–Present**

*Adjunct Professor, Management & Marketing*

- Designed and currently teach **Applied AI for Marketing: Building AI Agents for Social Media Growth**, a 7-week, 4-credit experiential course that moves non-engineers through Python, APIs, prompting, agent architecture, analytics feedback loops, orchestration, and portfolio-ready AI systems.
- Co-teach Entrepreneurship & Innovation, guiding undergraduate teams through customer discovery, validation, and AI-enabled MVP development.

**Sabercademy** — Remote

**Mar 2026–Present**

*Founder*

- Founded Sabercademy to **bridge analytics and AI engineering**, teaching analysts how to move from chat-based AI usage to Cursor, Python, Git, APIs, MCP, and governed agentic workflows.
- Developing build-first curriculum and team enablement for AI-native analytics while using practitioner feedback to identify recurring workflow pain points that can become implementation offerings or reusable products.

## EDUCATION

**Cornell University**

**May 2024**

**M.S. Business Analytics, Marketing Analytics Concentration**

**Susquehanna University**

**May 2021**

**B.S. Business Data Science**

## TECHNICAL SKILLS

**Data / Cloud:** Snowflake, AWS S3, Hive, BigQuery, Vertica, PostgreSQL, Parquet, PyArrow

**AI / Agents:** MCP, OpenAI API, LangGraph, LangChain, LLM tool use, text-to-SQL, semantic context, human-in-the-loop workflows

**Analytics / Measurement:** Tableau, Looker/LookML, Mode, Power BI; Bayesian modeling, MTA, Markov chains, experimentation, regression
